The application has been amended as requested in the communication filed January 5, 2004 and January 16, 2004. Accordingly, claims 1-230 have been canceled, and claims 231-390 have been entered.

Claims 231-390 are pending and under consideration.

The specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

The terminal disclaimers filed on December 31, 2003 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of U. S. patents 6,333,149 and 6,620,589 have been reviewed and are accepted. The terminal disclaimers have been recorded.

Examiner's Amendment:

In claim 351:

- (a) line 1, before "common ligand", insert "second";
- (b) Step (a)(1), line 1, before "CL mimic", insert "first";
- (c) Step (b), line 1, before "CL mimic", insert "second";
- (d) Step (b)(1), line 1, before "CL mimic", insert "second";
- (e) Step (b)(3), line 2, before "CL mimic", insert "second"; and
- (c) Step (b)(3), line 4, before "CL mimic", insert "second".

Authorization for this examiner's amendment was given in a telephone interview with Deborah L. Cadena on January 23, 2004.

Claims 231-390 are allowed.

The following is an examiner's statement of reasons for allowance: Applicants disclose a method of identifying an NMR signal of a nucleolus of an atom located proximal and between two substrate of an enzyme and the use of the said NMR signal to identify a nucleolus of an atom of a substrate mimic that is proximal to the enzyme atom. The method is simple and does not involve NMR chemical shift assignment of all the amino acid residues involved in binding the substrate or inhibitor which can be time consuming. The method is applicable to any enzyme which requires two substrates or a substrate and a cofactor. The result of the method is useful in designing a combinatorial library of compounds, which are bisubstrate mimic (bidentate inhibitors for the enzymatic activities) and would substantially limit the number of the members of the library. The filing of proper terminal disclaimer on December 31, 2003 over U. S. patents 6,333,149 and 6,620,589 obviated an obviousness-type double patenting rejections of the claims over the two

patents. Since the claims are not taught or suggested in the prior art of record, the claims are allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
